AIRBAG SYSTEM

Shock Buffering Protection System

Inflates fully in
0.25 second

Airbag Structure

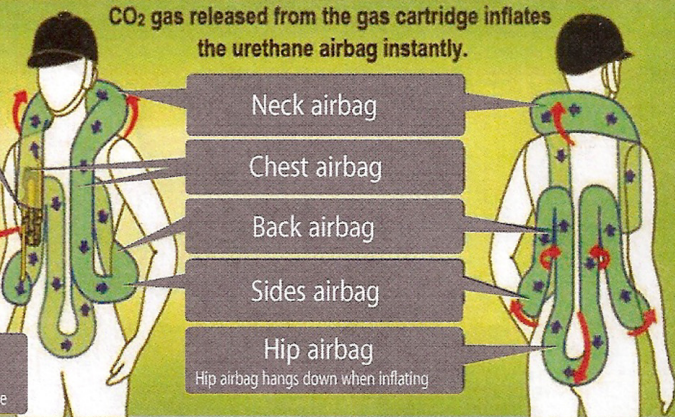

Key box
holds a CO₂ gas cartridge

Key ball to be pulled out
to release the gas into the
airbag instantly.

Coiled wire to be
connected to a proper
place of the
saddle

One-touch release
to connect/disconnect a coiled
wire when getting on/off the horse

CO₂ gas released from the gas cartridge inflates
the urethane airbag instantly.
